Market Overview

So, as has been the case so often this year, global equity markets defied expectations and staged a strong recovery during October. A real sense of nervousness and uncertainty about the persistence of rising inflation and the integrity of the post-pandemic economic recovery had led to considerable weakness in certain market sectors in general and growth stocks in particular. Just when many investors had thought they had seen the best equity markets had to offer in 2021, global markets went on to register new record levels.

Let's get straight to the data then: the MSCI World index rose 5.6% in October, the gains were led largely by the US equity market, which rose a remarkable 7.0%. Much of these gains were driven by growth and tech shares – that much is clear from the NASDAQ's 7.3% monthly gain. The S&P Mid and Small cap indices rose 5.8% and 3.4% respectively. Other reasonable gains were posted by Switzerland, which rose 4.0%, Hong Kong 3.3% and the German market, which rose 2.8%. In stark contrast, emerging markets underperformed sharply; the MSCI Emerging Market index rose only 0.9%. The Brazilian, Turkish and South African currencies were relatively weak, which didn't help, although on the back of a strong (+6.3%) oil price, the Russian equity market was firm (+3.7%). The Brazilian equity market declined 6.7%, while the Turkish market rose 8.2% in local currency terms. The Chinese equity market fell 0.6% but the Indian market rose 0.9%.

Global bond yields continue to rise gradually, and prices fall accordingly, resulting in the Bloomberg Global Aggregate Bond index falling 0.2% - in stark contrast to the MSCI World index comparable return of 18.0%.

Units in linked insurance policies should be considered as medium to long-term investments. The value of units may go up as well as down and past performance is not necessarily a guide to future performance. Unit prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (Brokerage, Securities Transfer Tax, VAT, Auditor's fees, Bank Charges, Custodian fees and the annual Management fee) from the portfolio divided by the number of units in issue. Fluctuations or movements in exchange rates may cause the value of any underlying international investments to go up and down. Forward pricing is used. Maestro Investment Management (Pty) Limited and 27Four Life Limited are members of the Association for Savings and Investments of South Africa (ASISA).
